

Radar (Spoon Rest D [P-18]) - SA-6

Libya

Type: Mobile Vehicle(s)

Commissioned: 0

Operator: Air Force

Length: 6 m

Width: 4 m

Crew: 0

Sensors / EW:

- Spoon Rest D [P-18] - (1972, 1RL131) Radar, Radar, Air Search, 2D Long-Range, Max range: 370.4 km

OVERVIEW: The P-18 radar (NATO name: SPOON REST D) is an mobile, 2-D early warning and target acquisition radar operating in the "A" Band at 150-170 MHz.

DETAILS: The P-18 provides improved angular discrimination and ECCM capabilities over the earlier P-12. It uses a single antenna for both transmission and reception. A complete system is usually composed of an antenna/shelter vehicle, a generator vehicle, and a secondary vehicle-mounted radar for IFF. Weapons systems frequently associated with the P-18 include the SA-6 GAINFUL and the SA-3 GOA SAMs.

Specifications:

Frequency: 150-170 MHz

Power output: 500-540 W (average), 200kW (peak)

PRF: 360 Hz

Range Resolution: 926 m

On/Off time: 3/5 min

Detection Ranges

 Fighter size aircraft

 500 m altitude: 60 km

 10000m alt.: 270 km

NOTES: The P-18 entered service in 1970 and was widely exported. VHF radars such as the P-18 remain important, as they can be better at detecting stealth aircraft than more recent, higher frequency radars. Additionally, The operating

Radar (Spoon Rest D [P-18]) - SA-6

frequencies of the P-18 allows the radar signal to diffract 5 - 10 % further around obstacles and the earth's curvature than higher frequency radars.
